

Europe JULY 2012 - Public headline summary

THIS page is public and available separately (WA12No31). The inside 8 pages of Euromaps full regional detail & timing in 8 periods through July is available via <http://www.weatheraction.com/wactmember5.asp> Enquiries +442079399946

A July of dramatic contrasts and likely record-level extremes

- **“Off-scale” rain, thunder-floods, giant hail, gales & tornado damage likely in NW Europe**
- **Record or near record heatwave East Europe - Forest fires likely.**
- **South track of Lows & S extension of Greenland High continue new ‘Little Ice Age’ (LIA), ‘Jet Stream South’, type circulation.**

The circulation patterns will be driven by changing Solar-Lunar factors which govern game-changing shifts of the Jet stream and associated tracks of Lows and consequential extreme deluges and extreme weather events and are predictable by WeatherAction’s Solar Lunar Action Technique (SLAT) from months ahead.

Standard warmist Meteorology which denies the reality of the pre new LIA world will – like last month - run into serious problems and underestimate the severity of events especially around WeatherAction’s main Red warning periods (**R4 & R5**) during which **standard Meteorology** short range forecasts of **rain will need to be doubled and flood and hail / tornadic events are likely to break records or go ‘off-the-scale’ at times.**

News content of this bulletin is public but no forecast content may be published or circulated in media or used in production of other forecasts without agreement of Weather Action and Piers Corbyn such as from signified sections or pages of the bulletin(s) or quotes issued to the newspaper or media concerned or displays issued on www.weatheraction.com

Vineyards trashed by giant hail May & June France. There will be many more set-backs to agriculture as the LIA approaches.

Massive Hail and thunder N/W Europe confirm WeatherAction

Thunderbolts blitz Berlin 29 June and massive hail damage in East France in the same period confirmed WeatherAction EuroMaps warnings for late June issued 30 May.

“These type of extremes or worse will continue through July and the devastation to Vineyards and crops already caused in Europe by earlier storms will continue this summer as Little Ice Age type circulation, storms, hail and, also, cruel winter blasts get a more frequent grip **summer and winter** in coming months and years”.

‘New Little Ice Age’ extreme weather is taking over

“The CO2 warmists claim that extreme weather would come from their delusional warming was a story they made up to frighten people. **The real extremes we see before us around the world - rather than computer model**

alarmism - are predictable and caused by predictable solar driven shifts of the Jet stream as the world cools towards a new Little Ice Age. The CO2 fiction has pointed the world in the wrong direction. **Governments must face reality:- prepare for the setbacks to food production and must boost economies rather than trash them with CO2-based taxes and energy price hikes”**, says Piers Corbyn astrophysicist of WeatherAction long range forecasters.
